

IoT Node Diagnostics & Network Console

PORTAL
Operations Console

Inspect node connectivity, firmware information, IP addresses, signal strength, detected Wi-Fi networks, and downloadable device files.

Node inspection workspace

Select a sensor node and review its latest network scans and device metadata.

SELECT NODE

SHOW LAST N SCANS (OPTIONAL)

-- Choose Node --

e.g. 200

SSIDs

View Data

Download Data .txt

Download SSID Log

Download Firmware

Firmware Help

Found 49 node folder(s). Choose a node to view its SSID scans.

FLEET OVERVIEW

49

Discovered node folders

SELECTED STATUS

Reported by node

Node health & intelligent warnings

Transparent health assessment from reporting continuity, signal quality and connection data.

HEALTH

Select a node to calculate health.

Node identity & firmware compliance

Operational identity for the selected device. Copy values directly for support work.

NODE ID

MAC

LATEST IP

FIRMWARE

LAST CONFIRMED SSID

Copy identity

Export diagnostic report

RSSI trend

Signal strength across the loaded scan history. Higher is better.

Connectivity timeline

Reporting continuity across the loaded history. Long intervals are highlighted.

● Normal report ● Unusual gap ● Long gap

Network history

Networks explicitly reported as connected. Nearby/strongest scanned SSIDs are not treated as confirmed connections.

SSID scan history

Server time, firmware, IP, RSSI, connection details, and detected networks.

TIME (SERVER)	FW	IP	RSSI (NODE)	HEALTH	CONNECTED	SSID LIST (SSID / RSSI)
---------------	----	----	-------------	--------	-----------	-------------------------

Tip: set "last N scans" to a reasonable number, such as 200-1000, for faster loading when a node has a very large log.
